

Krishna Kumar Prajapati

About me

My Experience

Startup	 OyeBusy Private Ltd.
Duration	6 Months
Technologies	Nextjs 13, Redux, Typescript
Integration	SEO, Google Map, SSR, Rest API
My Role	Frontend Web Developer (React)

As a Front-end Web Developer at Oyebusy, I thrived in a team-oriented environment with a focus on communication and collaboration. Daily meetings and discussions aimed to drive updates, improve task management, and enhance business communication and growth. Oyebusy offers top-notch home services, including electrical and plumbing repair.

My Skillset

In context with programming languages and tools I currently work in **React**, **Redux** and **JavaScript**. I am always open to accept new challenges and tools to improve my skills.

My Goals

I am looking for an opportunity to work with a team that runs on clear communication. I want to align myself with a company I believe in and where I can create positive change. I am always looking to learn more and am open to taking on challenging projects.

Projects with Organization

OyeBusy Private Ltd.

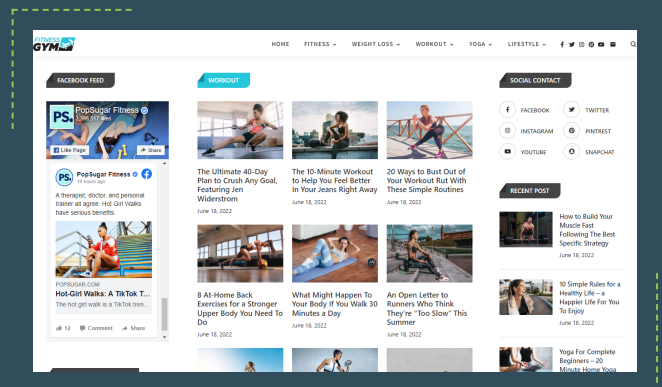

1. As a Front-end Web Developer at Oyebusy, I was part of a dynamic and communicative team with a strong focus on collaboration and daily meetings.
2. Our primary objectives were to drive updates, manage tasks, and improve business communication and growth, all while providing top-notch home services such as electrical and plumbing repair.
3. Working at Oyebusy allowed me to contribute to a service-based product company and further develop my skills in a fast-paced and challenging environment.

Practice Projects

React GYM Web App

I developed a GYM project utilizing React, Firebase, and Node.js, showcasing my ability to work with multiple technologies. The project allowed me to further expand my knowledge and implement features such as pagination with React-Router-DOM and utilizing Array Methods (filter, sort and find). This project served as an opportunity for me to enhance my skills as a Front-end Web Developer and demonstrated my ability to create high-quality and functional applications.

Full-Stack NewsPaper Website

Developed a complex website project utilizing Node.js, MongoDB, Next.js, and Server Side Rendering (SSR) technologies. Implemented features such as server-side source code generation, database-powered comments and inputs, dynamic pagination with react-router, multiple categories, a mega menu, persist layout for consistent user experience during routing, and responsive design using Tailwind CSS. On the backend, implemented fetching of articles through queries (page, size, limit) and error handling for a seamless user experience.
